Biodirect Decontamination Procedure – Lab Equipment Surface

Surface Decontamination (to be performed prior to shipping to Biodirect)

1. Wear rubber gloves & face mask / goggles
2. Spray equipment with 1:10 dilution of chlorine bleach
3. Let stand at least 5 minutes
4. Wipe thoroughly with paper towel
5. Discard towel in red Biohazard bin
6. Spray with 70% alcohol solution
7. Wipe with paper towel & discard towel in red Biohazard bin
8. Label "DECON", date & initial

*** Biodirect will not accept any instrumentation that does not have proof of decontamination; a decontamination certificate has to accompany the system.**

Additional information

Exposure to Infectious Agents

In the event of an exposure to an infectious agent or material, the following guidelines should be used:

a. Intact skin:

- Remove contaminated clothing
- Wash contaminated skin for 1 minute with soap and water
- Broken, cut or damaged skin or puncture wound
- Remove contaminated clothing
- Wash contaminated skin for 5 minutes with soap and water
- Seek medical attention

b. Eye:

- Immediately flush eyes for at least 15 minutes with water, preferably using an eyewash; if no eyewash is available, pour water on the eye(s) for 15 minutes, rinsing from the nose outward to avoid contamination of the unaffected eye.
- Hold eyelids away from your eyeball and rotate your eyes so that all surfaces may be washed thoroughly.
- Seek medical attention

c. Ingestion or Inhalation:

- Seek medical attention at your nearest medical center
- Do not induce vomiting unless advised to do so by a health care provider

d. Sharps:

Use a high degree of caution when handling any potentially contaminated sharp items, such as:

- Sharp corners & edges
- Probes, needles & syringes
- Slides, pipettes, capillary tubes, and scalpels
- Broken glass

* In case of emergency contact facility safety officer, poison control, or 911
